

IoT:

mobile client

Introduce: mobile client for managing controllers

Components:

1. Mobile client software

Communication interfaces:

1. WiFi
2. GSM

Features of software:

1. Java 8 SE
2. Android 7.0 (Nougat)

The Android client allows users to:

1. Login using the user account
2. Login using the QR code
3. Manage each of the 4 channels in real time
4. Configure each of the 4 channels for automatic operation
5. Configure the connection to the WiFi network
6. Send a message to the support service

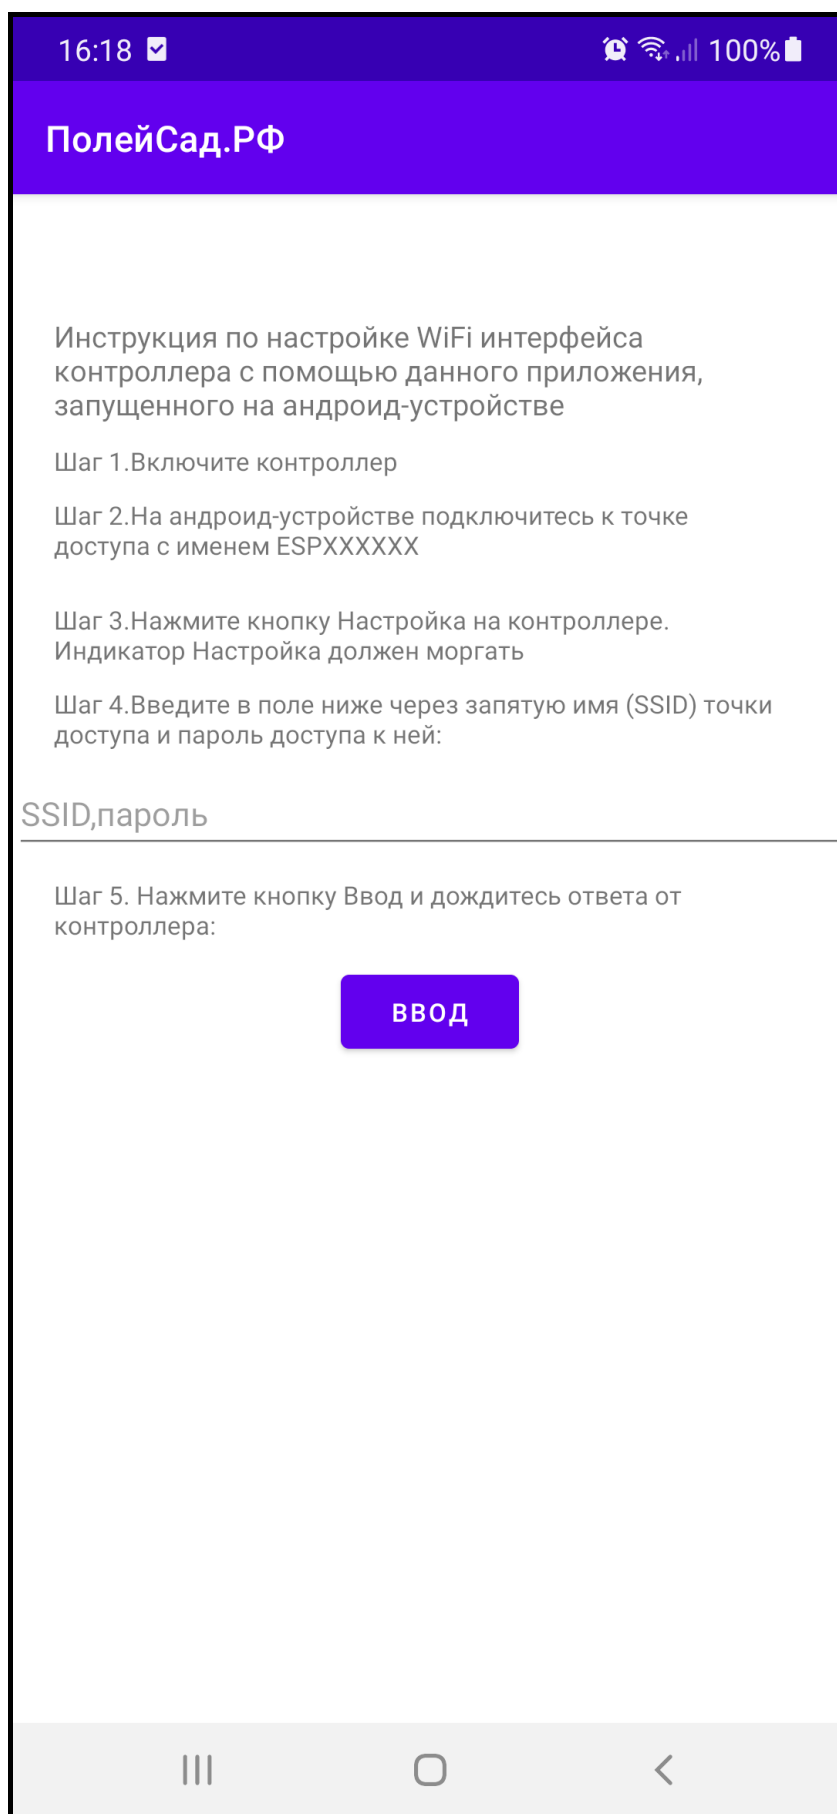

Figure 3. About

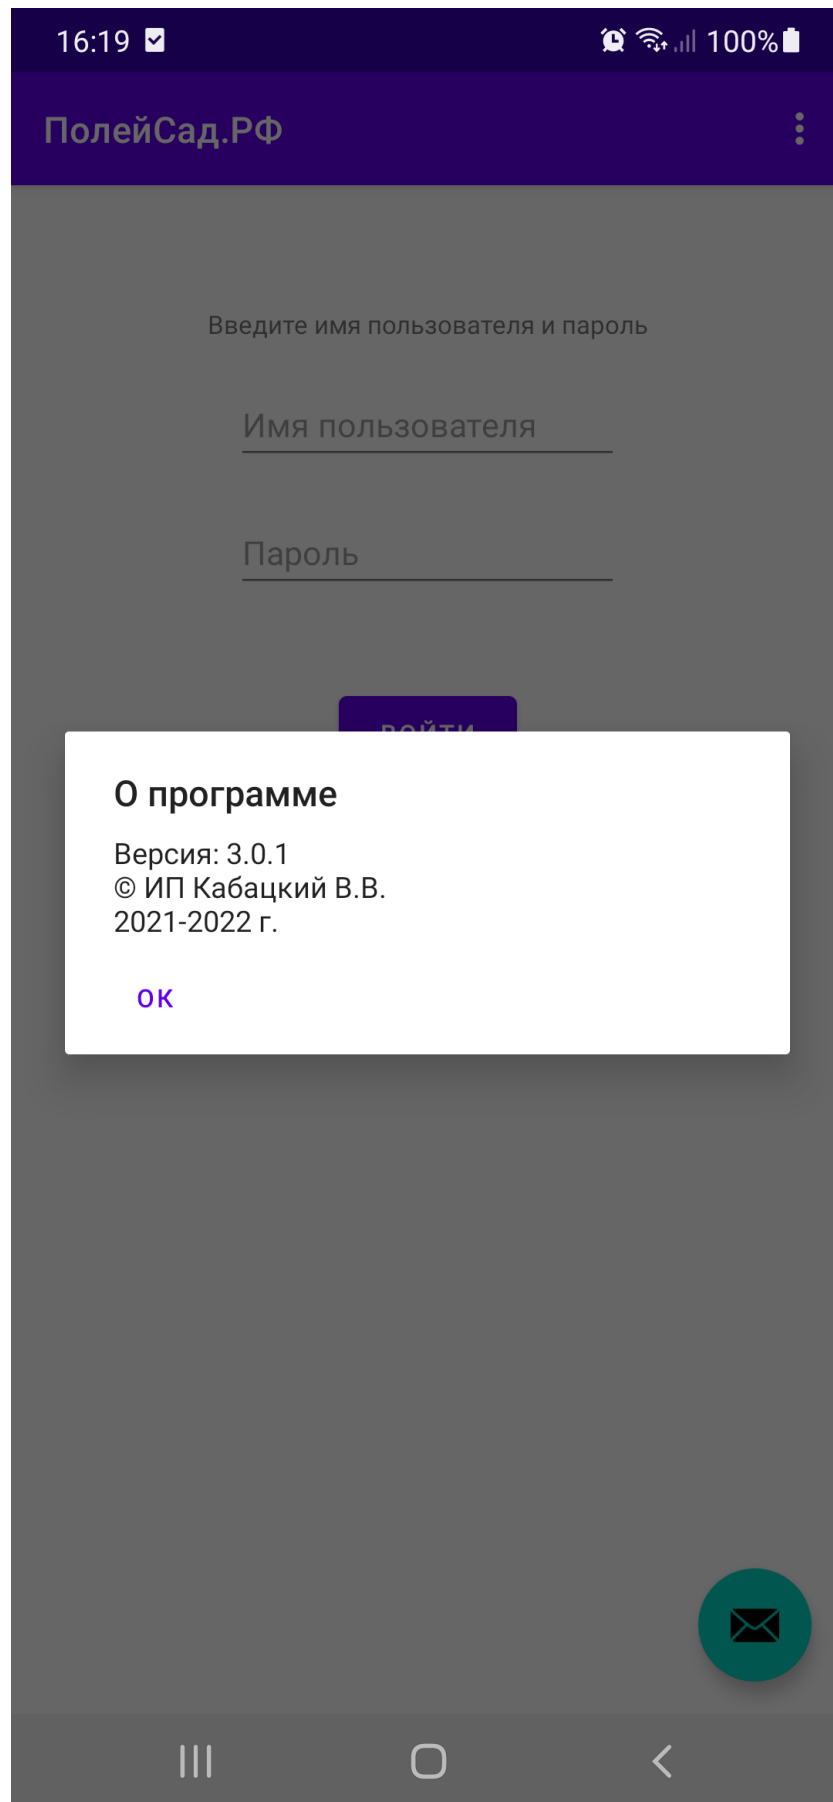

Figure 4. Message screen

The screenshot shows a mobile application interface for 'ПолейСад.РФ'. At the top, a status bar displays the time 16:21, a checkmark icon, and system icons for alarm, Wi-Fi, cellular signal, and 100% battery. Below this is a blue header bar with the text 'ПолейСад.РФ'. The main area is white and contains the instruction 'Введите Ваше сообщение (не более 400 знаков):' followed by a large text input field with the placeholder 'Сообщение'. At the bottom, there is a blue button labeled 'ОТПРАВИТЬ'. The very bottom of the screen shows the standard Android navigation bar with icons for the app drawer, home, and back.

```
package ru.fieldgarden.application.activity;

import android.content.Intent;
import android.os.Bundle;
import android.view.View;

...
...
...

import ru.fieldgarden.application.R;

public class MainActivity extends AppCompatActivity {

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);
        Toolbar toolbar = findViewById(R.id.toolbar);
        setSupportActionBar(toolbar);

        FloatingActionButton fab = findViewById(R.id.fab);
        fab.setOnClickListener(new View.OnClickListener() {
            @Override
            public void onClick(View view) {
                Intent intent = new Intent(MainActivity.this,
MessageActivity.class);
                startActivity(intent);
            }
        });
    }

    @Override
    public void onBackPressed() {
        OnBackPressedListener backPressedListener =
findOnBackPressedListener();
        OnBackPressedListener2 backPressedListener2 =
findOnBackPressedListener2();

        if (backPressedListener != null) {
            backPressedListener.onBackPressed();
        } else if (backPressedListener2 != null) {
            backPressedListener2.onBackPressed();
        } else {
            super.onBackPressed();
        }
    }
}
```

```
private OnBackPressedListener findOnBackPressedListener() {
    FragmentManager fm = getSupportFragmentManager();
    for (Fragment fragment : fm.getFragments()) {
        FragmentManager fm2 = fragment.getChildFragmentManager();
        for (Fragment fragment2 : fm2.getFragments()) {
            if (fragment2 instanceof OnBackPressedListener) {
                return (OnBackPressedListener) fragment2;
            }
        }
    }
    return null;
}

private OnBackPressedListener2 findOnBackPressedListener2() {
    FragmentManager fm = getSupportFragmentManager();
    for (Fragment fragment : fm.getFragments()) {
        FragmentManager fm2 = fragment.getChildFragmentManager();
        for (Fragment fragment2 : fm2.getFragments()) {
            if (fragment2 instanceof OnBackPressedListener2) {
                return (OnBackPressedListener2) fragment2;
            }
        }
    }
    return null;
}

public interface OnBackPressedListener {
    public void onBackPressed();
}

public interface OnBackPressedListener2 {
    public void onBackPressed();
}
```

Thanks for attention!
